DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Jung et al. (6,362,857).

Regarding claims 1, 2, Jung shows an operating module (personal computer 4 which inherently includes a keyboard, 23), a control module (personal computer 4 which inherently includes a CPU, 21), a first interface (6), a control panel (13), a second interface (6), and the operating module or keyboard, which inherently includes an interface for connection with the personal computer 4.

Regarding claim 3, the personal computer 4 inherently includes a parallel-to-serial converter and a demultiplexer.

Regarding claim 4, the keyboard of the personal computer inherently includes identification.

Art Unit: 2614

Regarding claim 5, the personal computer 4 and the interface 6 together inherently includes all the features as claimed.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Reimers (5,036,395) shows a video control system with a control unit and operating module.

Nichols et al. (4,698,664) shows an editing system.
